IMPORTANT WARNING

This product includes instructions for installation, which must be carefully followed. The instructions are worded in such a manner to assume that the installer is capable of completing these types of electronic installations. Suppose you are unclear about what you are instructed to do or believe you do not understand the instructions to complete the installation properly and safely. In that case, you should consult a technician who has this knowledge and understanding. Failure to follow these instructions carefully and install the interface as described could cause harm to the vehicle or safety systems on the vehicle. Interference with specific safety systems could cause damage to persons as well.

NEED HELP?

Open the camera app on your smartphone and point your rear camera at the QR-Code to scan it. Finally, tap the pop up banner to open support website.

Precautions

PLEASE READ BEFORE YOU START THE INSTALLATION

- Please study these instructions carefully before installing NavTool interface.
- Many new vehicles use low-voltage or data-bus systems that can be damaged by test lights and logic probes. Test all circuits with a digital multi-meter before making connections.
- Do not disconnect the battery if the vehicle has an anti-theft-coded radio, unless you have the radio code.
- If installing an external push button switch, check with the customer about where to install the switch.
- To avoid accidental battery drainage turn off the interior lights or remove the dome light fuse.
- Roll down a window to avoid being locked out of the car.
- Use of this product in a manner different to its intended way of operation may result in property damage, personal injury, or death.
- Set Parking brake.
- Remove the negative battery cable.
- Protect fenders before starting.
- Using protective blankets to cover front seats, interior of the vehicle and center console.
- Always install a fuse 6-12 inches away from NavTool interface, 5 amp fuse should be used.
- Always secure NavTool interface with Velcro or double side tape to prevent rattling of the interface.
- When securing NavTool interface make sure that panels can be closed back easily.
- Use electrical tape on all you connections and splices, do not leave any exposed connections.
- Route all wires along factory harnesses, try not to drill or make any unnecessary holes.
- Make sure you are not connecting to any data wires; always check your connections with a multi-meter.
- Always use help of a professional installer to prevent any damage to the vehicle or NavTool interface.

What's In The Box?

NavTool Interface
(Part # NAVTOOL6.0-AR2-NBT)

NavTool Joystick
(Part # NT-JY1)

NavTool LVDS Cables
(Part # NT-GMBLU-LVDS)

NavTool Interface Harness

(Part # NT-BT-AAA)

USB Configuration Cable
(Part # NT-USB-CNG)

Joystick Receiver
(Part # NT-JYRCV1)

Interface Connectors Description

NavTool Interface (Part # NAVTOOL6.0-AR2-NBT)

Main Connector for Universal Interface Harness- This port is dedicated for a connection of a universal wiring harness

LVDS Cables Input and Output- This port is dedicated for the LVDS cables.

Configuration Port- This USB port is dedicated for the interface configuration only.

Data LED- Normal operation of the interface must have blue LED blinking. If the blue LED is not blinking, the interface is not receiving data from the vehicle. If the blue LED is not blinking, the interface will not operate properly.

Power LED- Normal operation of the interface must have a green LED ON. If the green LED is not ON, the interface is not receiving power. If the green LED is not ON, the interface will not work, and your vehicle radio may also stay OFF.

HDMI LED- Normal operation of the interface must have a green LED ON. If the green LED is not ON, the interface HDMI is not receiving power. If the green LED is not ON, the interface HDMI port will not work.

USB Port for Apple CarPlay and Android Auto- This USB port is for hard-wire connection of a smartphone if you want your iPhone or Android hard-wired to the interface instead of a wireless connection. This USB port also provides charging for your smartphone. This connection is not required if you plan to use Apple CarPlay and Android Auto via the wireless connection. Do not use this USB port to power up HDMI streaming devices such as Roku, FireStick, Chromecast, or similar devices.

HDMI Port- HDMI port is dedicated for connecting video sources such as iPhone mirroring, Android Mirroring, Apple TV, Roku, FireStick, Chromecast, PlayStation, Xbox, or similar devices.

Universal Harness Description

Rear Camera Input /Video Input 1- This input is dedicated for an aftermarket rearview camera or a video source with an RCA video output. Your vehicle factory camera will continue to work as before without any changes.

Front Camera Input /Video Input 2- This input is dedicated for an aftermarket front view camera or a video source with an RCA video output. Your vehicle factory camera will continue to work as before without any changes.

Left Camera Input / Video Input 3- This input is dedicated for an aftermarket left view camera or a video source with an RCA video output. Your vehicle factory camera will continue to work as before without any changes.

Right Camera Input / Video Input 4- This input is dedicated for an aftermarket right view camera or a video source with an RCA video output. Your vehicle factory camera will continue to work as before without any changes.

Connector for Vehicle Specific Harness- This connection is dedicated for connecting vehicle specific plug and play wiring harness.

Connector to Controller- This connection is dedicated for connecting the NavTool Supplied joystick receiver harness.

Connector for Microphone Input- This connection is dedicated for connecting a built-in vehicle microphone. See the quick connection guide on page 7 of this manual.

+12V Manual Activation Input- This connection is used only if the factory rearview camera is not operating correctly in reverse. In that case, this wire must be connected to the vehicle's reverse +12V output.

+12V Output- 500 mA output can be used to drive a relay. This output provides +12V at all times when the vehicle is running.

Quick Connection Guide

Quick Connection Guide

Installation Instructions

STEP 1

NO APPLICATION OR SOFTWARE DOWNLOAD IS REQUIRED TO CONFIGURE THE INTERFACE.

To configure the interface, you must use Windows, Mac, or Google computer.

Windows computers must use the latest version of Google Chrome or Microsoft Edge browser.

Mac computers must use the latest version of the Google Chrome browser.

Google computers must use the latest version of the Google Chrome browser.

TO CONFIGURE THE INTERFACE, GO TO [HTTPS://CONFIG.NAVTOOL.COM](https://config.navtool.com)

Connect the interface to the computer using supplied USB Configuration Cable (Part # NT-USB-CNG)

SCAN ME

To see a video of the configuration process
Scan QR-Code or go to
https://youtu.be/iES_rW240X0

STEP 2

Remove Vehicle Navigation Radio or Color Screen

List of Required Tools:

1. Plastic Panel Removal Tool- Example of a removal tool is shown below. Any similar removal tool will do the job. It does not need to be the same as the picture below.
2. 7 mm Socket- Example of a 7 mm socket tool is shown below. Any similar tool will do the job. It does not need to be the same as the picture below.

Installation Instructions

STEP 2 Continued

Step 1:

Instrument Panel Trim Plate

1. Use a flat bladed plastic trim tool to aid in the removal of the trim plate from the instrument panel assembly.
2. Disconnect the electrical connection.

Step 2:

1. Radio Control Fasteners (Qty: 4)
2. Disconnect the electrical connections

Step 3:

1. Radio Fastener (Qty: 2)
2. Disconnect the electrical connections

Installation Instructions

STEP 3

Step 1: Connect supplied plug and play harness (Part # NT-GMQUAD-BLU) to the back of the radio.

Step 2: Connect factory connectors into the supplied vehicle specific plug and play harness.

 (For complete image, see Quick Connection Guide on page 7)

Step 2:  Reconnect previously removed radio connectors into the back of the radio.

STEP 4

Connect supplied universal wiring harness (Part # NT-WHNT6) into plug and play harness (Part # NT-GMQUAD-BLU).

 (For complete image, see Quick Connection Guide on page 7)

Installation Instructions

STEP 5

Step 1: Connect supplied joystick receiver harness (Part # NT-JYRB1) into 4 pin connector on the universal wiring harness (Part # NT-WHNT6). See quick connection guide on page 7.

Step 2: Connect supplied joystick receiver (Part # NT-JYCV1) into joystick receiver harness (Part # NT-JYRB1). See quick connection guide on page 7.

Installation Instructions

STEP 6

Step 1: Connect factory LVDS cable into the NavTool supplied LVDS cable.

Step 2: Connect NavTool supplied LVDS cable into the brown port shown in the image below.

STEP 7

Step 1: Connect NavTool supplied LVDS cable into the blue port on the back of the radio.

Step 2: Connect NavTool supplied LVDS cable into the brown port shown in the image below.

Installation Instructions

STEP 8

Plug in main interface (Part # NAVTOOL6.0-AR2-NBT) into the universal wiring harness (Part # NT-WHNT6). See quick connection guide on page 7.

- The product installation is now complete.
- Do not reassemble the vehicle until testing is fully complete. Only after you have tested that everything is working can you reassemble the car.
- If you are adding side or front cameras, install them and plug them into the appropriate camera RCAs.
- If you are installing any HDMI or streaming devices, connect it to the HDMI port of the NavTool.

Installation Instructions

STEP 9

Plug the NavTool supplied AUX Activator (Part # NT-AUX-ACT) into vehicle's 3.5mm AUX jack. See picture below.

AUX Input Located
Inside Center Console
Or Under the Radio

NavTool supplied AUX Activator
(Part # NT-AUX-ACT)

STEP 10

After the interface is installed and you activate the NavTool, if your screen is blinking or you see a NavTool image for a second and it goes to a black screen, you must cut a wire on the harness.

Testing and Settings

STEP 1

- Start the car, observe NavTool LED lights should be one blinking blue and two steady lit green LED lights.

- At this time, your car radio should boot up into its initial state, and the radio should be working. Please check that the radio operates appropriately. All radio functions are working, including CD, Satellite Radio, AM/FM radio, audio plays from car speakers, and all other radio features.

STEP 2

Set Radio to AUX Audio Input:

- SRCE Button: Press the SRCE button to display the audio screen. Press to switch between AM, FM, or XM, if equipped, Disc, or AUX (Auxiliary). Must set a radio to auxiliary/AUX before activating NavTool to hear audio from car speakers.
- Audio will not play through car speakers if AUX activator jack is not connected or radio is not set to AUX input.

Testing and Settings

STEP 3

- On the supplied joystick remote (Fig. 1), press and hold the back button for 3-5 seconds. The interface should emit a chirp and the interface menu (Fig. 2) should appear on the screen.

Fig. 1

Fig. 2

STEP 4

Adjust camera inputs if you haven't done so already during the initial configuration of the interface.

- Press menu button on the remote control to reveal NavTool menu bar.
- Rotate joystick to the right to highlight menu option.
- The menu option is the last icon on the right.
- Then press enter on the joystick remote to enter settings.

Step: 1

- Rotate joystick remote to highlight the settings gear.
- The settings gear is the top icon.
- Then press enter on the joystick remote to enter settings.

Step: 2

MISCELLANEOUS SETTINGS	ON	OFF
APPLE CARPLAY / ANDROID AUTO (AUTO ON MODE)	<input checked="" type="radio"/>	<input type="radio"/>
INTERFACE AUDIO SOUND	<input checked="" type="radio"/>	<input type="radio"/>
MANUAL ACTIVATION WIRE AS REVERSE TRIGGER +12V	<input type="radio"/>	<input checked="" type="radio"/>
	SAVE	CANCEL

Apple CarPlay/Android Auto (Auto ON Mode) only set it to ON if you do not plan to use HDMI or video inputs

- Rotate joystick to highlight Manual Activation Wire as Reverse Trigger +12V.
- Then press enter button on the joystick remote to change the setting to OFF, once the red dot is set to OFF (image shown on the left), rotate the joystick to highlight SAVE button and press the enter button on the joystick remote to SAVE.

Step: 3

Testing and Settings

STEP 5

Camera Settings

Rotate joystick to select the Camera Settings option then press enter button on joystick to enter this option.

Step: 1

INPUTS	FACTORY CAMERA	VIDEO INPUT	AFTERMARKET CAMERA	PARKING LINES
	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	
	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	
	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	
	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	
SAVE				CANCEL

Camera Settings

- Image above shows you typical camera settings.
- To change camera settings, rotate joystick to highlight the input on the left, once you highlighted desired camera input (rear, front, left, or right), then press enter on the joystick remote to change the option for particular camera input.
- Once the selected option is highlighted, rotate joystick to another camera input.
- Once all camera inputs are set, rotate joystick to highlight SAVE button then press enter on the joystick remote to save options.

Step: 2

- Set vehicle in reverse gear to test operation of the factory rear view camera.
- Press and hold back button on the supplied joystick remote to exit the interface back into the factory screen.

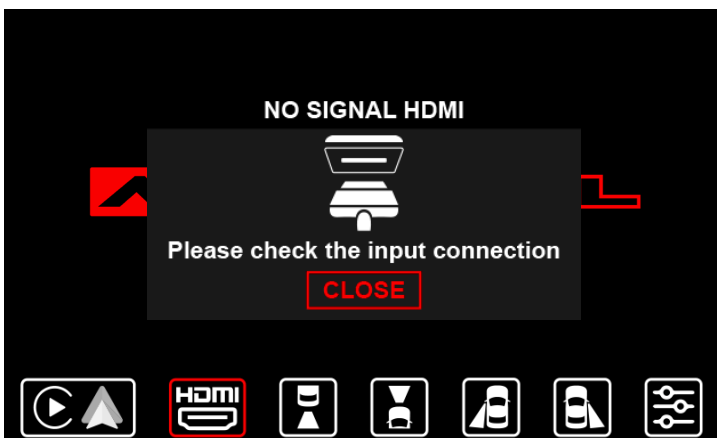

Testing and Settings

STEP 6

- Test HDMI input if you are connecting any HDMI video source. To bring up the bottom menu, press and hold one of the four touch screen corners for 3 seconds.

- Touch the HDMI button on the screen to enter the HDMI input of the interface.
- Video signal from your HDMI source will appear on the screen.

- If no video source is connected or the connected source is not correctly working, you will see this message. (Image shown above)
- Test AV inputs by selecting them in the menu of the interface or if you are installing any aftermarket cameras.
- To test aftermarket front camera, put the car in reverse then into drive. Front camera should display on the screen.
- To test aftermarket left and right cameras, use left and right turn signals. Left and right cameras should display depending on the turn signal activated.
- To exit HDMI input or any Camera inputs, tap the touch screen to bring up the bottom menu.

After everything is tested and working, reassemble the vehicle.

Vehicle Reassembly Checklist

When performing vehicle reassembly, please make sure to go over the list and checkoff check mark boxes:

- Check to see if all connectors behind the screen, radio, HVAC etc. were reconnected.
- Check that LCD screen shuts off with the key off, and turns back on with the key on.
- Check touchscreen operation.
- Check Heat and AC controls operation.
- Check AM/FM/SAT radio reception.
- Check CD player/changer operation.
- Check GPS signal reception.
- Check cigarette lighter or +12V power source for accessory or constant power.
- Check to see if any other panels that were removed during installation and now being reassembled have all and any electrical connectors reconnected.
- Turn on parking light and check all dashboard lights operation.
- Check all panels for proper fit, make sure no gaps in panels are left behind.

If all steps above are checked off, you will save time, money and have an extremely happy customer.

All above steps eliminate any unnecessary customer comebacks to your shop.

If you require any further assistance please call our tech support line, email or go online

Interface Menus and Settings

NavTool Interface Screen

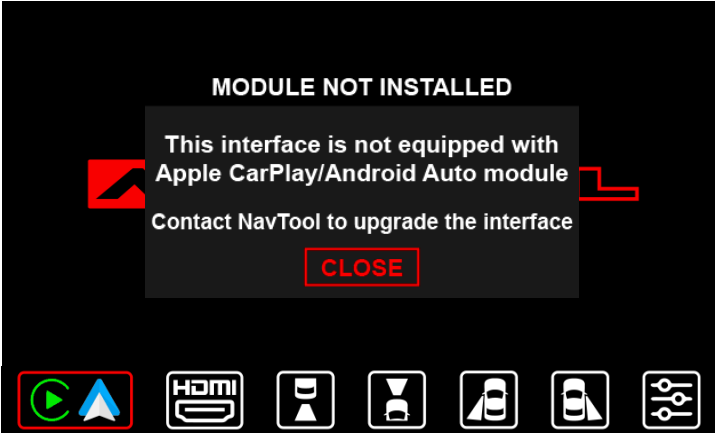

After activating NavTool interface, you will be brought to this screen that you can navigate with the supplied joystick remote.

Apple CarPlay/Android Auto

Press enter button on joystick to enter this option.

After selecting Apple CarPlay/Android Auto you will be brought to your Apple CarPlay/Android Auto screen.

Apple CarPlay/Android Auto Module Not Installed

You will get this message when selecting this option on the NavTool interface that is not equipped with Apple CarPlay/Android Auto module.

HDMI

Rotate joystick to select HDMI option then press enter button on joystick to enter this option.

After selecting HDMI with a HDMI source attached, you will be brought to your HDMI's device screen and connected image will appear on the screen.

No HDMI Signal

You will get this message when selecting this input with no HDMI source connected to interface.

Back-Up Camera

Rotate joystick to select Back-Up Camera option then press enter button on joystick to enter this option.

After selecting the back-up camera input, you will be brought to your back up camera screen. This will not work if a back-up camera is not installed. (Note: This input will not display factory installed rear-view camera)

Front Camera

Rotate joystick to select Front Camera option then press enter button on joystick to enter this option.

After selecting the front camera input, you will be brought to your front camera screen. This will not work if a front camera is not installed. (Note: This input will not display factory installed forward facing camera)

Left Lane Watch Camera

Rotate joystick to select Left Lane Watch Camera option then press enter button on joystick to enter this option.

After selecting the left lane watch camera input, you will be brought to your left lane watch camera screen. This will not work if a left lane watch camera is not installed. (Note: This input will not display factory installed left lane watch camera)

Right Lane Watch Camera

Rotate joystick to select Right Lane Watch Camera option then press enter button on joystick to enter this option.

After selecting the right lane watch camera input, you will be brought to your right lane watch camera screen. This will not work if a right lane watch camera is not installed. (Note: This input will not display factory installed right lane watch camera)

Settings

Rotate joystick to select the settings option then press enter button on joystick to enter this option.

After selecting the settings option, a menu will expand showing different interface settings you can change.

Settings Options Menu

Rotate joystick to select the settings option then press enter button on joystick to enter this option.

Selecting the setting options input, you will have access to change brightness, contrast, camera settings, parking line settings, and interface settings. You can close this by selecting the down arrow.

Brightness

Rotate joystick to select the brightness option then press enter button on joystick to enter this option.

After selecting brightness, you can adjust the brightness of the interface. The white bar in the middle shows what the interface brightness is at. You can lower the brightness of the interface by selecting the icon on the left and you can increase the brightness of the interface by selecting the icon on the right. Save or cancel any changes you have made.

Contrast

Rotate joystick to select the contrast option then press enter button on joystick to enter this option.

After selecting contrast, you can adjust the interface's contrast. The white bar in the middle shows what the interface contrast is at. You can lower the contrast of the interface by selecting the icon on the left and you can increase the contrast of the interface by selecting the icon on the right. Save or cancel any changes you have made.

Camera Settings

Rotate joystick to select the Camera Settings option then press enter button on joystick to enter this option.

How to navigate the interface to change your camera settings.

Camera Settings Menu

Rotate joystick to select the Camera Settings option then press enter button on joystick to enter this option.

Rotate the joystick to select a particular camera input. Then press enter on the joystick to select an option you want for that particular camera input.

Factory camera: Select this option if your vehicle is equipped with a factory installed rear view camera.

Video input: Select this option if your vehicle is not equipped with a factory rear view camera and you are not planning to add a aftermarket camera or if you wish to use this input as a video input.

Aftermarket camera: Select this option if you are installing an aftermarket rear view camera.

Parking lines: Select this option if you are installing an aftermarket rear view camera and you wish to add distance lines to the camera image.

Factory camera: Select this option if your vehicle is equipped with a factory installed forward facing camera. Do not select this option if your vehicle is equipped with 360 degree parking cameras, 360 degree front parking camera is not considered forward facing camera.

Video input: Select this option if your vehicle is not equipped with a factory forward facing camera and you are not planning to add a aftermarket camera or if you wish to use this input as a video input.

Aftermarket camera: Select this option if you are installing an aftermarket forward facing camera.

Quick Operation Guide

Thank you for purchasing NavTool. If you have any questions, please call toll-free at 877-628-8665.

The color/navigation screen will display a factory image when you first start your vehicle.

 **Prior to NavTool installation, if your smartphone is paired to the vehicle bluetooth system for calling, please go into your smartphone bluetooth settings, find your vehicle and do Forget This Device.**

• Set the radio to AUX input to hear sound from the interface. This will let you hear sound from the HDMI input. See Page 1 for details.

• On the supplied joystick remote (Fig. 1), press and hold the back button for 3-5 seconds. The interface should emit a chirp and the interface menu (Fig. 2) should appear on the screen.

Fig. 1

Fig. 2

How to exit video inputs: To leave HDMI or any camera inputs, tap the menu button on the remote to bring up the bottom menu bar.

Aftermarket Camera Operation: The factory rearview camera will continue to work in reverse. If you installed a forward-facing camera, you could manually select it in the menu, or it will automatically display up to 10 miles per hour on the screen. This automation will happen when you put the car into drive after reverse gear. Aftermarket left and right lane watch cameras will work with respective turn signals while driving or can be selected manually via the menu.

How to Return to Factory Screen: Press and hold the back button on the supplied remote for 3 seconds to turn off NavTool interface. Press and hold the back button until the bottom menu appears on the screen, release and press and hold the back button again to return to the factory menu.

User Manual

Interface Settings

Settings

- Press the menu button on the remote control to reveal NavTool menu bar.
- Rotate the joystick to the right to highlight menu option.
- The menu option is the last icon on the right.
- Then press enter on the joystick remote to enter settings.
